## LEARNING AND SCIENCE

*By Oliver Wendell Holmes, Jr.\**

As most of those here have graduated from the Law School within the last twenty-five years, I know that I am in the presence of very learned men. For my own part, lately my thoughts have been turned to

“old, unhappy, far-off things,  
And battles long ago;”

and when once the ghosts of the dead fifiers of thirty years since begin to play in my head, the laws are silent. And yet as I look around me, I think to myself, like Correggio, “I too am, or at least have been, a pedagogue.” And as such I will venture a reflection.

Learning, by learned brethren, is a very good thing. I should be the last to undervalue it, having done my share of quotation from the Year Books. But it is liable to lead us astray. The law, so far as it depends on learning, is indeed, as it has been called, the government of the living by the dead. To a very considerable extent no doubt it is inevitable that the living should be so governed. The past gives us our vocabulary and fixes the limits of our imagination; we cannot get away from it. There is, too, a peculiar logical pleasure in making manifest the continuity between what we are doing and what has been done before. But the present has a right to govern itself so far as it can; and it ought always to be remembered that historic continuity with the past is not a duty, it is only a necessity.

I hope that the time is coming when this thought will bear fruit. An ideal system of law should draw its postulates and its legislative justification from science. As it is now, we rely upon tradition, or vague sentiment, or the fact that we never thought of any other way of doing things, as our only warrant for rules which we enforce with as much confidence as if they embodied revealed wisdom. Who here can give reasons of any different kind for believing that half the criminal law does not do more harm than good? Our forms of contract, instead of being made once for all, like a yacht, on lines of least resistance, are accidental relics of early notions, concerning which the learned dispute. How much has reason had to do in deciding how far, if at all, it is expedient

for the State to meddle with the domestic relations? And so I might go on through the whole law.

The Italians have begun to work upon the notion that the foundations of the law ought to be scientific, and, if our civilization does not collapse, I feel pretty sure that the regiment or division that follows us will carry that flag. Our own word seems the last always; yet the change of emphasis from an argument in Plowden to one in the time of Lord Ellenborough, or even from that to one in our own day, is as marked as the difference between Crowley's poetry and Shelley's. Other changes as great will happen. And so the eternal procession moves on, we in the front for the moment; and, stretching away against the unattainable sky, the black spearheads of the army that has been passing in unbroken line already for near a thousand years.
